Abstract:
Young people's mental health and wellbeing have been badly hit by the pandemic. As we seek to help the nation build back better from COVID-19, this must be placed front and centre. Programmes like NCS can play a crucial role in promoting positive wellbeing through developing life skills, and supporting communities with social action and volunteering. In this latest report from NCS Trust, we share the experiences of our programme over the past 12 months, including a renewed focus on mental health and wellbeing to support the nation’s youth through and beyond the toughest of years.

Mental health - a growing issue for young people
Poor mental health among young people is a growing issue. Even before the pandemic, research showed one in eight 5-19 year olds had at least one mental disorder, and 5% met the criteria for two or more mental disorders. Over the course of the pandemic, with lockdown restrictions and school closures, the statistics look even starker.

As many as one in six 5-16 year olds are now believed to have a mental health problem. Research by the Royal College of Psychiatrists showed that between April and December 2020, 372,438 under-18s were referred for mental health help; the highest number ever recorded. The number of children and teens needing emergency care due to mental health crises rose 18% to 18,269.

Recent evidence found that average wellbeing scores on measures including life satisfaction, happiness, self-worth and anxiety declined during the pandemic, with young people among the groups with the highest propensity to feel lonely.

Self-isolation and social distancing have led to increased anxiety and depression, feelings of demotivation, boredom, fear and anger.

Through our own surveys, we know teens have been particularly worried about the impact of the pandemic on their education and development (43%), their mental (38%) and physical health (19%), and that they have been concerned for the health of friends and family (50%). Our latest research, in February 2021, showed 60% of 16-19 year olds feeling more isolated and lonely than normal. Almost two in five (37%) say they have been struggling to cope with the everyday things.

As the nation has grown ever more reliant on digital interactions, there are concerns about what this could mean for young people's welfare. Our survey found three in five young people (59%) feel they have had to rely too much on social media as a way to connect with friends during the pandemic. Experts argue that more
time online makes young people more vulnerable to exploitation and abuse,8 with potential for further increases in cyberbullying.9 The pandemic has highlighted inequalities in digital access for young people, with one in ten finding it hard to keep up because they don’t have the best technology.10

There are also concerns about the impact of multiple lockdowns on those young people already vulnerable and at risk in England, including the 1.5 million (13.5%) with a parent or carer with a severe mental health problem,11 the estimated 102,000 young carers,12 and the 50,000 children on child protection plans suffering, or at risk of suffering, significant harm at home.13

There are also the economic implications - the wider costs of mental illness in England have been estimated at £105.2 billion each year, including direct costs of services, lost productivity at work and reduced quality of life.14

Supporting positive mental health in young people

We know young people want more support for their mental health and wellbeing - two in three according to our own polling.15 Tackling the issue is of increasing strategic importance to policy makers. In 2018 the Government published its strategy for tackling loneliness in England,16 with £3.3 million made available for partnerships to deliver interventions focused on tackling youth loneliness.

Since the onset of COVID-19, the Government has issued guidance to parents and carers on supporting young people with their mental health and wellbeing,17 with specific guidance on supporting children’s remote education.18 £79 million has been approved for youth mental health, including support teams in schools and expanding access to community mental health services (talking therapies, cognitive behavioural therapy, eating disorder services, etc.)19 During Children’s Mental Health Week, a new Youth Mental Health Ambassador, Dr Alex George, was appointed.20

A wide range of support is available to young people online, including guidance from organisations such as Public Health England21 and YoungMinds,22 so they can find the help they need.

The role of NCS

Supporting young people’s health and wellbeing has always been critical to the work of NCS. Through our core programmes, young people have the opportunity to develop essential life skills like positivity, teamwork, leadership, creativity and problem-solving, working in teams and mixing with new people. They learn about, and support, their local communities through social action projects and volunteering, helping them feel part of a generation with awareness of, and connection to, a diverse range of people, opportunities and networks.

Research shows that programmes like NCS help improve wellbeing among young people, with evidence that social action and volunteering are positively linked to enhanced wellbeing, improved life satisfaction, increased happiness and decreased symptoms of depression.23 Further research has also found that discrete periods of youth engagement can lead to improvements in life satisfaction, with significantly stronger impacts among those from more economically disadvantaged communities.24 Evidence suggests that people who volunteer have been protected from some of the worst effects of the pandemic; reporting
greater optimism for the future and higher subjective wellbeing. Social and emotional learning programmes can help to improve emotional skills, attitudes about self and others, and social behaviour in young people, leading ultimately to cost savings to the taxpayer.  

Independent evaluations of NCS show the standard summer programme has positively impacted participants’ wellbeing across all four of the Office for National Statistics’ wellbeing measures. We see evidence of improvements in life satisfaction, the extent to which participants feel the things they do in their life are ‘worthwhile’, happiness and anxiety levels, and can show a social return on investment with every £1 spent generating an economic ‘wellbeing’ benefit of £2.33.  

Supporting young people during lockdown  

We know that three in four young people have been missing face-to-face contact during the pandemic. They’ve told us they want more opportunities to engage with their friends and peers about mental health, signposting on who they can talk to, free access to wellbeing apps and better mental health support in school, while doing their bit to support others. Seventy-three per cent were either already volunteering or wanted to volunteer back in April 2020. After almost a year of COVID-19, 67% say they are interested in volunteering or doing social action to help support their communities as part of the recovery. 

In the absence of our usual residential programme last year, NCS Trust, together with our partner network, have been making it our mission to support young people, and to provide them with opportunities to connect during the pandemic...  

Supporting young people to connect digitally: Last summer we created a free digital experience through our Staying Connected hub, providing open access to articles, features and stories that aligned with core elements of the typical NCS curriculum, including skills and life lessons not normally learnt in the classroom, and support with mental health and wellbeing. We attracted over 350,000 unique visitors and over two million unique engagements with our content, including posts and live content on NCS social media channels. Seventy-four per cent of those accessing the hub said it helped their mental health and 78% that it made them feel more connected with other people. The recently-launched NCS Connect digital hub for 2021 will continue to offer young people exclusive digital content, including on self-care and staying motivated, as well as fun challenges, building life skills, and delivering ‘Do Good’ projects in local communities.

Providing opportunities to connect and make a difference: NCS continued to create opportunities for young people to do their bit in their communities through the ‘Keep Doing Good’ programme last summer, offering volunteering and social action opportunities. NCS participants gave over 500,000 hours of social action and volunteering in support of local communities, working in charity shops in partnership with the Charity Retail Association, volunteering in food banks, and supporting those lonely and isolated in their local communities, while supporting their own wellbeing, building confidence and skills, and connecting with fellow citizens.
mental health, and created Facebook, Instagram and JustGiving pages to help raise awareness and encourage donations to support mental health charity, MIND (raising over £600 so far). And in Wakefield, a group of 18 teens working with Wakefield Trinity tidied up an overgrown allotment, which was a referral place for people with mental health issues or who were suffering from loneliness.

Some young people also chose to donate their refund (from payments made for the summer 2020 residential programme) to The Mix, the UK’s leading support service for young people.

**Evolving our programme curriculum:** Recognising that the pandemic and national lockdown were amplifying vulnerabilities in young people, we have introduced an additional core topic to the curriculum: ‘Looking after your wellbeing’. Our network has also looked to incorporate local content, enlist specialist staff to support young people with mental health issues, and include more signposting to specialist support (including online).

**Making sure our staff feel well trained and supported:** Linked to this, it has been important to ensure our staff feel able to support young people on programme. As well as the ongoing safeguarding measures we have in place, we have worked with youth mental health charity, YoungMinds, to provide training for our service providers and their programme staff around the issue of mental health.

YoungMinds has designed a range of learning interventions for staff, and training materials for our service providers to use in the lead up to programme. In 2020, this included additional webinars to support understanding and management of the prevalent mental health needs of young people as they came out of lockdown, with a particular focus on trauma and anxiety management. It also included a comprehensive online module looking at the different types of mental health conditions, the importance of removing stigma and some simple tools and skills to use whilst supporting young people.

**Supporting young people as they return to school/college:** Supporting young people in getting back to the new normal has been a priority for NCS. In September 2020 we launched our Further Education (FE) and School Support programme to young people returning to their education in around 400 schools and colleges. The support offered a range of resources and workshops in areas such as resilience training, post-COVID-19 socialisation and health and wellbeing. In Spring 2021 we followed up on the success of FE/School Support with our Skills Booster lesson packs, which provided over 750 school and college staff with resources designed to have a direct positive influence on the school curriculum and student outcomes, in particular, helping young people focus on their wellbeing and future goals. From April 2021, NCS will again be offering resources and workshops to schools to support them in developing their students’ resilience, wellbeing, and optimism for their futures.

**Getting young people’s voices heard:** We know young people have strong views about the issue of mental health and we’ve been keen to support them in vocalising and sharing them. For example, our Change-Makers series included a selection of articles and other online content, highlighting the great work NCS graduates have been doing through their Local Action Groups to support mental health and loneliness. We also addressed the issue of mental health through our Youth Rising podcast series, with two episodes focusing on mental health specifically. We teamed up with Channel 4 to create four documentaries as part of their social series True Stories, which included one around Music and Mental Health, plus three other documentaries with over one million views, covering food waste, a clothes swap shop and social justice, helping bring communities together to improve wellbeing.
We also hosted a ‘Make a Change’ letter-writing competition, inviting young people to write a personal letter to Baroness Barran, the Minister for Civil Society, about how digital technology is contributing to loneliness amongst teenagers, and their ideas for tackling this. As the minister responsible for the Government’s loneliness agenda, we were thrilled that - despite the pandemic - our four finalists got the chance to meet the Baroness (albeit virtually!) to talk through their brilliant ideas. Luke Stokes-Roberts, 19, winner of the competition, told us:

“I took part in the NCS ‘Make a Change’ competition because I felt I had a duty to help others who are in a worse position than I am. I hope the ideas I’ve come up with may help to bring about tangible results for teenagers struggling with an invisible illness. It’s important that there are practical ways to help teens combat loneliness, particularly as we enter a second lockdown. Staying active and helping out other people who need support can help steer teens away from feeling isolated.”

**Learnings from our Network**

Our network of providers has also been working to ensure delivery on the ground has been suitably tailored and adapted to the challenges of mental health and their local contexts.

For example, **Catch 22** observed how young people in the West Midlands had been experiencing the pandemic differently - with those in more rural Herefordshire feeling more isolated than those in urban Wolverhampton, as well as cultural differences in how young people talked about mental health. In response, Catch 22 took a more holistic approach to supporting wellbeing by running additional online sessions which covered physical health and nutrition as well as mental health, which would complement the mental health sessions young people were already receiving at school. They also introduced a session run by The Young Gamers and Gamblers Education Trust around keeping safe online during lockdown and the potential addictions that come with gaming.

Recognising young people’s experience with COVID-19, family bereavement and economic hardship, **Headliners (UK)** in the North East, introduced a range of additional wellbeing layers to their 2020 programme, including pre-programme check-ins with young people and their parents, daily wellbeing check-ins, and additional breaks for young people and staff taking part in the programme.

**In conclusion...**

Young people have fared badly during the pandemic, with their mental health and wellbeing taking a particularly bad hit. As the nation begins to build back better and fairer, children and young people’s mental health and wellbeing must be placed front and centre.

Programmes like NCS have been shown to deliver positive impacts for young people’s wellbeing, with clear cost-benefits.

Together with our partners NCS Trust has learnt much about the challenges young people have faced during lockdown, their aspirations for the future, and the positive support they will need for their mental health going forward. Meeting those needs remains at the heart of what NCS does.
